

Eukolia Native PDF Engine Fixture

Eukolia Test Suite

2026

Contents

1	Alpha Section	2
1.1	Alpha Subsection	2
2	Beta Section	3
3	Gamma Section	3

1 Alpha Section

This paragraph exists so that the native engine has real body text to extract, search and select. It mentions the marker AARDVARK exactly once, and it also mentions the standalone word marmot twice, so that a case-insensitive search and a whole-word search both have something real to find.

It carries two deliberately distinctive tokens. The first is ZEBRAQUAGGA, and it is the only text on this page containing those five letters, so a whole-word search for the abbreviation must fail while a substring search must succeed. The second is QuokkaToken, whose mixed case is what the case-sensitivity assertions are built on. Here is marmot once more.

The engine must report a sensible MediaBox for this page and must be able to rasterise it at several scales, so the fixture deliberately contains enough glyphs and rules that a rendered tile is never a single flat colour.

$$e^{i\pi} + 1 = 0 \tag{1}$$

A display equation above gives the renderer curves and italic glyphs to deal with. Inline mathematics such as $\alpha^2 + \beta^2 = \gamma^2$ and a fraction $\frac{a+b}{c+d}$ add more glyph variety within a single line.

- First bullet item, deliberately long enough to exercise line wrapping.
- Second bullet item, mentioning the hyphenated compound four-and-twenty so that search can be tested across a break.
- Third bullet item, mentioning nothing in particular.

1.1 Alpha Subsection

A subsection adds another outline entry, which lets the test assert that the outline tree nests rather than coming back flat. It also cross-references Section 2 on page 3, which becomes an internal PDF link annotation, and links to an external page, which becomes an external link annotation.

2 Beta Section

The second page exists so that page counting, per-page text extraction and page-scoped search all have something real to work with. It carries a table.

Item	Count
Alpha	1
Beta	2
Gamma	3

3 Gamma Section

The third section starts on the same page as the second one, so the outline has two entries that map onto the same PDF page.

Marker line: ZEBRAFISH.
